HealthConnect Rwanda

Comprehensive Business Insight & Healthcare Performance Analysis

1. Executive Overview & Strategic Objectives

This business intelligence report synthesizes operational, financial, clinical, and patient experience metrics across HealthConnect Rwanda's network of 20 healthcare facilities. Unifying multi-departmental data into executive dashboards reveals core operational strengths, critical revenue bottlenecks, and actionable opportunities for patient care enhancement.

20,000	8.0 Billion	100.0%	2.99 / 5.0
ACTIVE PATIENTS	TOTAL REVENUE (RWF)	BED OCCUPANCY RATE	AVG PATIENT SCORE

2. Patient Population & Demographic Insights

Analysis of 20,000 active patient profiles reveals an average age of 45.03 years with an even gender distribution (50.45% Female, 49.55% Male). The patient intake pipeline comprises 3,933 new patient enrollments against 510 returning patients, indicating a expanding user acquisition footprint across provinces (Kigali City, Eastern, Northern, Southern, and Western).

Patient Age Group Distribution

Chronic Condition Profiling: Non-communicable diseases show high prevalence across all adult brackets. Hypertension, Asthma, and Diabetes affect equal clusters (~5,000 patients each), requiring dedicated long-term care management protocols.

3. Clinical Outcomes & Treatment Efficacy

Clinical data reflects high throughput with 60,000 total diagnoses recorded across 5,000 facility appointments. Key clinical performance indicators reflect sustained inpatient care and zero short-term readmissions.

5.49 Days	0.16%	5,000	5,000
AVG LENGTH OF STAY	READMISSION RATE	TOTAL LAB TESTS	TOTAL PRESCRIPTIONS

Diagnostic Profile & Pharmacological Distribution

Diagnoses follow a balanced distribution between Moderate (33.92%), Mild (33.64%), and Severe (32.44%) cases. Top diagnosed conditions and their primary prescribed treatments are detailed below:

Primary Diagnosis	Prevalence Rank	Top Prescribed Medication	Medication Volume	Severity Profile
Hypertension	Rank 1	Amlodipine	~1,100 Prescriptions	Balanced (Mild/Mod/Severe)
Gastritis	Rank 2	Omeprazole	~1,050 Prescriptions	Predominantly Mild / Moderate
Upper Respiratory Infection	Rank 3	Amoxicillin	~980 Prescriptions	Acute / Mild
Diabetes	Rank 4	Metformin	~950 Prescriptions	Chronic / Moderate
Malaria	Rank 5	Artemether-Lumefantrine	~890 Prescriptions	Acute / Severe cases prioritized

Clinical Outcome Highlight

The exceptionally low readmission rate of **0.16%** combined with an average length of stay (ALOS) of 5.49 days indicates effective inpatient stabilization prior to discharge, minimizing post-care complications.

4. Financial Performance & Revenue Realization

HealthConnect Rwanda generated **9.0 Billion RWF** in total billings, realizing **8.0 Billion RWF** in recognized revenue. However, insurance claim frictions present significant cash flow exposure.

9.0bn RWF	8.0bn RWF	49.98%	920M RWF
TOTAL BILLED	TOTAL REVENUE	CLAIM APPROVAL RATE	OUTSTANDING BALANCE

Insurance Payer Breakdown & Payment Methods

Insurance claims account for 4.88 Billion RWF of total billings, split evenly across four major payers in Rwanda. Payment channels display equal uptake across digital, cash, and insurance streams.

Insurance Provider	Claim Volume Share	Total Billed Amount	Approval Status
Radiant	25.33%	1.24 Billion RWF	50.05% Approved / 49.95% Pending
Private Insurers	24.94%	1.22 Billion RWF	50.05% Approved / 49.95% Pending
RSSB (RAMA / Mutuelle)	24.88%	1.21 Billion RWF	50.05% Approved / 49.95% Pending
MMI (Military Medical)	24.85%	1.21 Billion RWF	50.05% Approved / 49.95% Pending

Financial Risk Warning: High Pending Claims Ratio

Nearly **50.02% of all submitted claims (2.44 Billion RWF)** remain in 'Pending' status. This bottleneck directly contributes to the 920 Million RWF outstanding balance, requiring urgent revenue cycle management (RCM) intervention.

5. Operations, Staffing & Capacity Utilization

Operational infrastructure spans 20 specialized facilities equipped with 2,000 available beds, 200 medical devices, and 1,170 staff members distributed equally (130 staff per primary department).

1,170	2,000	100.0%	200
TOTAL STAFF	TOTAL AVAILABLE BEDS	BED OCCUPANCY	MEDICAL EQUIPMENT

6. Patient Experience & Satisfaction Analysis

Out of 21,064 total feedback records logged, the net average satisfaction rating stands at **2.99 out of 5.0**, with positive sentiment at 59.56%. Scores range from 3.02 in Emergency down to 2.76 in Intensive Care (ICU).

Operational Bottleneck: 100% Occupancy & Rating Decline
A sustained 100% bed occupancy rate combined with rigid, flat staffing allocations (130 per department) is straining clinical teams, directly driving down monthly patient satisfaction scores from 3.06 (Jan) to 2.82 (Sep).

7. Executive Strategic Roadmap

- **Revenue Cycle Automation:** Implement automated pre-authorization workflows with RSSB, Radiant, and MMI to reduce claim approval turnaround time and capture the 2.44B RWF pending claims pool.
- **Dynamic Bed & Staff Allocation:** Transition from fixed departmental staffing to dynamic nurse-to-patient staffing models to alleviate strain in 100% occupied inpatient units.
- **Targeted Patient Experience Initiatives:** Focus quality improvement teams on ICU and Internal Medicine departments to address care perception and elevate average ratings above 4.0.
